Stuck in a waste contract?

Introducing our contract buyout programme

Many businesses believe they are locked into a waste contract until expiry. We have identified your waste as a potential fit for our expanded Greater Manchester processing facility. Where it meets our criteria, Fresh Start may be prepared to contribute towards verified exit costs and help you switch sooner.

How the programme works

1

PROVIDE:

A copy of your current waste agreement and details of your existing waste services.

2

FRESH START ASSESSES:

Remaining contract term; verified exit costs; waste types and volumes; location and service requirements; commercial and operational viability.

3

WE CALCULATE:

The value of the waste to our facility and whether a contribution towards exit costs is possible.

4

IF APPROVED, WE PROVIDE A PROPOSAL SHOWING:

Fresh Start's contribution; customer contribution, if any; proposed service package; transition plan and proposed start date.

IMPORTANT: Not every contract or waste profile will qualify. Any agreed contribution will be paid directly to the existing waste provider against verified termination charges. There is no cash alternative. All proposals are subject to credit, operational and commercial approval.

Why are we doing this?

RECYCLING FACILITY EXPANSION

75,000 tonnes 
→ 150,000 tonnes

This additional capacity means we can process significantly more material. We are therefore actively identifying businesses producing dry, recoverable and recyclable waste that is well suited to our facility.

Why do we want your waste?

Not all waste is equal. Based on what we understand about your operation, we believe your waste could be a strong fit for our facility. Dry, recoverable material has a genuine value to us because it provides greater opportunities to separate and recycle useful resources. Where the waste, volume and service profile meet our criteria, some of that value may be used to support an earlier switch.

Dry and processable

Cleaner, drier commercial waste that is well suited to sorting and processing.

Recoverable material

Waste containing materials such as cardboard, paper, plastics and metals that can be separated and recycled.

Lower contamination

Less food and moisture can improve the material's recovery potential.

Consistent volumes

Regular commercial waste volumes help support our expanded processing operation.

A strong operational fit

Services and locations that can be efficiently incorporated into our collection network.

Let's have a conversation.

Ask us whether your waste could qualify for our Contract Buyout Programme.
